

April 2020 Update News

IFFO's monthly newsletter

Editorial

Now more than ever, health and safety has come to the fore and ranks top of the world's agenda. Food production is a broad and multifaceted sector with a complex value chain. It bears a huge responsibility: feeding the world in a healthy way but also in a responsible way. The seafood sector's responsibility was highlighted in the recent EAT-Lancet report [...]

IFFO RS changes name and logo

IFFO RS was originally founded by IFFO in 2009. The rebranding campaign acknowledges the certification programme's journey, undertaken in 2014, to a separate entity with its own governance structure, articles, purposes and budget.

What makes fishmeal so special?

To truly understand its unique characteristics, we must first break it down and look at what is actually in fishmeal and how farmed fish benefit from consuming it.

[Learn more](#)

Fishmeal and fish oil have a multiplier effect

The overall fed aquaculture figure is for every 0.22kg of whole wild fish used in fishmeal production, a kilo of farmed fish is produced. In other words, for every 1 kg of wild fish used 4.5 kg of farmed fish is produced.
