

UPDATE

Newsletter - April 2019

Editorial

As the World Water Day was celebrated around the world on March 22nd, there is a growing awareness of our ocean's fundamental importance to all life on earth. Oceans are home to millions of species and are playing a specific role as global ecological regulator, in climate regulation and in food security. Tangible commitments towards more sustainability were displayed during the events that took place recently in Bergen, [Bangkok](#), Boston, and [Wuzhen City](#).
